From PCOD Challenges to Emotional Release & Greater Balance ✨

Ankita came to me while navigating challenges related to *PCOD and an irregular cycle. As we explored her emotional patterns, she became aware of the deep-rooted **fear and guilt connected to experiences from her past*.

Rather than focusing only on the physical concern, Ankita consciously chose to work on the emotional weight she had been carrying. She began releasing these past patterns, creating greater acceptance and compassion towards herself.

Over time, she experienced a *more regular, normal cycle*, which she saw as an important part of her overall journey.

For Ankita, the transformation wasn't only about her cycle. It was about understanding herself more deeply, releasing the emotional burden of the past and creating a healthier relationship with her own emotions.

✨ *Her biggest transformation:* She didn't just want a change in her physical experience—she chose to address the fear and guilt she had been carrying and consciously create a more balanced relationship with herself.
